DETAILED ACTION

Allowable Subject Matter

1. Claims 2-4, 7-10, 15 and 19-22 allowed.
2. Claims 14 and 23 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 12 and 13 rejected under 35 U.S.C. 103(a) as being unpatentable over Kobachi et al. (6,060,337) in view of JP (09-83013) (Prior art submitted by the applicant) further in view of Kitanishi (5,214,495)

Regarding Claims 12 and 13, Kobachi et al. disclose a photoreflexive detector including a light emitting element and a light receiving element located at different distances from an object reflecting light from the emitting element where in Fig. 13, it is disclosed a pair of element loading portions loaded with semiconductor elements 212A, 212D, and 210 and positioned one above the other within light transmitting resin 219, a seal resin 219 sealing pair of element loading portions within the light emitting resin and leads 215 and 213 connected to respective semiconductor element being exposed on

sealing resin 219 where the upper element loading portion is unbent within the light transmitting resin. Kobachi et al. fail to disclose the required coplanarity, the required light emitting/light receiving portions for the photocoupler and the unbent element loading portions inside the resin. However, JP 09-83013) discloses a semiconductor device where in Fig. 2 the required coplanarity and the required light emitting and light receiving portions of the photocoupler device is disclosed. Furthermore, Kitanishi discloses photointerrupter and manufacturing method thereof where in Fig. 14, light emitting and light receiving elements 1 and 2 face each other and they are mounted on and unbent portions of element loading sections 3 and 4 inside the resin.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required coplanarity and the required light emitting and light receiving portions of the photocoupler device and the required unbent portions of the element loading section in Kobachi et al. as taught by JP 09-83013 and Kitanishi, respectively, in order to have a semiconductor device with increased ease of manufacture and reliability.

Conclusion

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO**

MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action.
